Dynamix Energy Services Tackles Problems for OPRA Members

What do you get when you have a winning team that loves to tackle problems? You get Dynamix Energy Services (DES). Dynamix is a design-build firm focused on maximizing energy efficiencies within various facilities across Ohio. With specialties in system design and controls programming, you can count on Dynamix Energy Services to provide innovative, value-based solutions for all your energy projects.

Six years ago, Todd Mace, principal of Dynamix Energy Services, identified an area of service that was a huge benefit to building owners but was overlooked by many. This service provides solutions to building owners who have issues with their heating, ventilation and air conditioning (HVAC) systems. Once these issues are resolved, the systems can operate in a more efficient manner. Although other companies offer similar services, DES has an advantage. The advantage is that Todd and his staff

An ENERGY PROJECT is an upgrade or renovation to a building's envelope or systems that relates to energy, such as lighting, HVAC, windows, roofing, plumbing fixtures and more.

have engineering backgrounds and utilize a consultant mentality. Most other companies are mechanical contractors or vendors of a specific product. Sometimes contractors have more of an acute approach to a problem without understanding how the entire system is affected, and vendors often focus on selling additional products as a resolution. This allows DES to present owners with the best solutions possible while remaining contractor- and vendor-neutral. In addition, DES has extensive field experience, so it is able to make most modifications itself. These qualities have helped DES gain tremendous traction in the industry.
