Mr. Todd Mace
Dynamix Energy Services
855 Grandview Ave.
Columbus, OH. 43215

Dear Todd,

Thank you and your team of engineers and contractors for our recent HVAC and building automation project. The amount of work completed in our two buildings and the time and manner in which it was completed was phenomenal. The nighttime installation of the VAV boxes, thermostats, occupancy sensors, etc. in the classrooms and offices was completely transparent to the teachers, students and staff the next morning. The two weekends of removal of old HVAC units and installation of the new Daikin HVAC equipment was expertly coordinated and all units were online and working for the start of school on Monday morning.

I am even more impressed with the Niagara Building Automation System (BAS). The BAS graphic interface is very easy to use and shows the total building and equipment operation at a glance. The level of temperature control and comfort within the building has improved tremendously as acknowledged by our teachers and staff. That is exciting, but even better is the energy savings the district is beginning to realize. I now have two months of billing with the new BAS in operation and our natural gas and electric bills are the lowest ever experienced in my tenure at DACC.

Lastly, I truly appreciate the detail Dynamix Energy Services presented in the state HB264 filing and the execution of this project. In the past, I have had contractors and engineers promise 'the moon' and not deliver. It is satisfying to know DES and your installation team stands behind your projects and delivers 110%.

On behalf of our district, thank you again for the improved energy efficiency, equipment operation and building comfort. I look forward to a lasting relationship with DES.

Sincerely,

Jack Higgins
Director of Operations
